

a TPM distances, no Φ involved
diff -0.015, $p = 0.63$

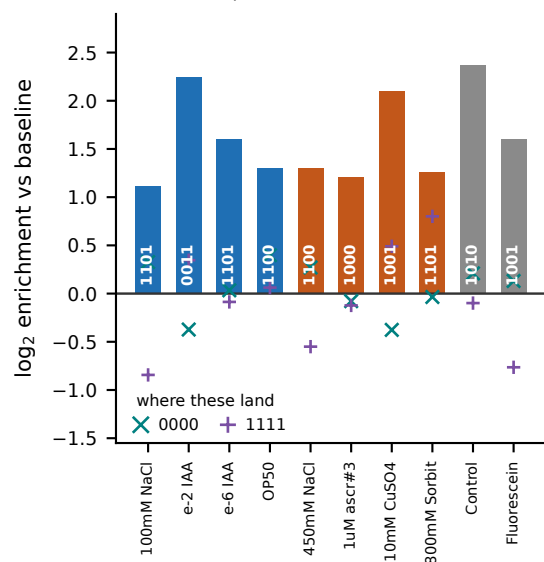

b 4 neurons: the prior supplies
~43% of the TPM

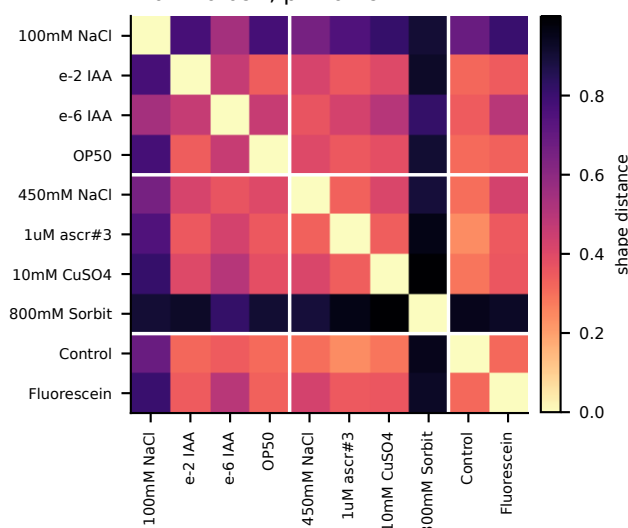

c Fewer neurons, less invention

d Selected state = most enriched vs baseline; 0000 and 1111 never win

e ONE global TPM, top-3 enriched states
diff -0.097, $p = 0.79$

f Six approaches, all null.
Hypothesis predicts negative
