

Blocking the self-terms (absent from published data by design) exposes the agreement: our three strongest cross pairs are three of the atlas's four detected pairs (green)

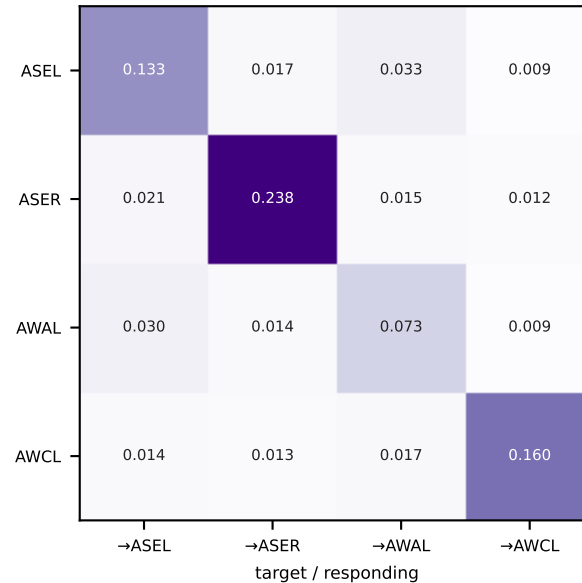

a Anatomy: synaptic contacts
(Cook 2019 via OpenWorm)

b Effective (signal propagation)
(Randi 2023; n.m. = not measured)

c Ours, full: diagonal dominates
the colour scale

d Ours, diagonal blocked to match b:
the cross-pattern emerges
