

$\Sigma\phi$ per state, regime vs regime — error bars are full-volume bootstrap SDs; state labels as in notebooks 14-15
 (format(int,'04b'): leftmost bit = AWCL ... rightmost = ASEL; 1000 = AWCL only, 0111 = ASEL+ASER+AWAL)

a stim-on vs stim-off: key states leave the diagonal

b static vs stim-off: states hug the diagonal
